

013717 SEC-CT Thin Layer Quartz Glass Spectroelectrochemical cell kit (Au)

1 . Contents

- (A) Purge tube (ETFE) 10 cm
- (B) SEC-C/C05 Pt counter electrode
- (C) SEC-C Au Gauze working electrode
- (D) SEC-C Teflon cap
- (E) SEC-CT Thin Layer Quartz Glass cell

2. Assembly

- (1) In advance, insert an Au Gauze working electrode(C) into the specified hole of a Teflon cap(D) from the back side.
- (2) Attach the Teflon cap(D) to a quartz glass cell(E) while adjusting the gauze part of the Au Gauze working electrode(C) to 1 mm optical path length. At this time, be careful not to bend the Au Gauze working electrode(C).
- (3) Subsequently, attach the Pt counter electrode(B) and, if necessary, a purge tube(A) to the predetermined holes, respectively.
- (4) Inject the sample solution through the hole for the reference electrode until the tip of the reference electrode is immersed (minimum 220 μ L). Be careful not to leave bubbles on each electrode.
- (5) Insert the reference electrode into the specified hole. Be careful not to leave bubbles at the liquid junction of the electrode.
- (6) Attach the quartz glass cell(E) to the cuvette holder, wire the electrodes, and connect to the purge tube(A) as necessary.

3. Caution

- (1) The welded part of the Au Gauze working electrode(C) is easily damaged, so be careful not to bend.
- (2) Be careful not to contact the Au Gauze working electrode(C) with the Pt counter electrode(B).

Optional products:

- 012167 RE-1B Reference electrode (Ag/AgCl)
- 013613 RE-1BP Reference electrode (Ag/AgCl)
- 013691 RE-1CP Reference electrode (Ag/AgCl/Saturated KCl)
- 013693 RE-2BP Calomel Reference electrode
- 012171 RE-7 Non Aqueous reference electrode (Ag/Ag⁺)
